SUMMARY

Applied Artificial Intelligence student with 15+ years of experience in technical operations, disaster relief logistics, subcontractor oversight, and manufacturing process engineering. Strong background in troubleshooting, quality assurance, and leading teams in high-pressure environments. Seeking roles in AI-driven operations, automation, or intelligent systems support.

CERTIFICATIONS & CLEARANCES

- e-QIP Federal Background Check (Active)
- TWIC – Transportation Worker Identification Credential (Active)
- OSHA Safety Training
- Additional certifications available upon request

SKILLS

AI & Automation: Applied AI fundamentals, automation concepts, systems thinking

Technical Operations: Troubleshooting, workflow optimization, process engineering

Leadership: Team supervision, subcontractor management, training & mentoring

Quality & Compliance: QA/QC, documentation, safety compliance

Data & Analysis: Root cause analysis, data collection, operational metrics

Manufacturing: Extrusion operations, wire & cable production, machine calibration

Field Operations: Disaster relief logistics, temporary facility setup, multi-department coordination

Soft Skills: Problem-solving, adaptability, communication, decision-making under pressure

PROFESSIONAL EXPERIENCE

Deployed Resources

Hybrid Field Technician / Supervisor / Quality Assurance 2016 – 2025

- Supported disaster relief, military, and government operations by setting up and managing temporary facilities.
- Oversaw subcontractors across construction, food service, sanitation, HVAC, security, and housekeeping.
- Ensured quality, safety, and compliance across multiple departments.
- Coordinated logistics for camp setup, operations, and demobilization.
- Provided technical troubleshooting and on-site problem resolution.
- Led teams in high-pressure, rapidly changing environments.

Tricab

Extruder Operator / Production Supervisor / Process Engineer 2009 – 2016

- Operated and optimized extrusion lines for wire and cable manufacturing.
- Supervised production teams and coordinated shift operations.
- Performed process engineering tasks including heat profile tuning, run-speed optimization, and tooling setup.
- Conducted quality control inspections and reduced defects through root cause analysis.
- Improved production efficiency through data-driven adjustments.

EDUCATION

Bristol Community College Applied Artificial Intelligence (In Progress)
